# Agenda

- What is the problem?
- Whose problem is it?
- What is SIPA?
- Why SIPA?
- Can we know everything?

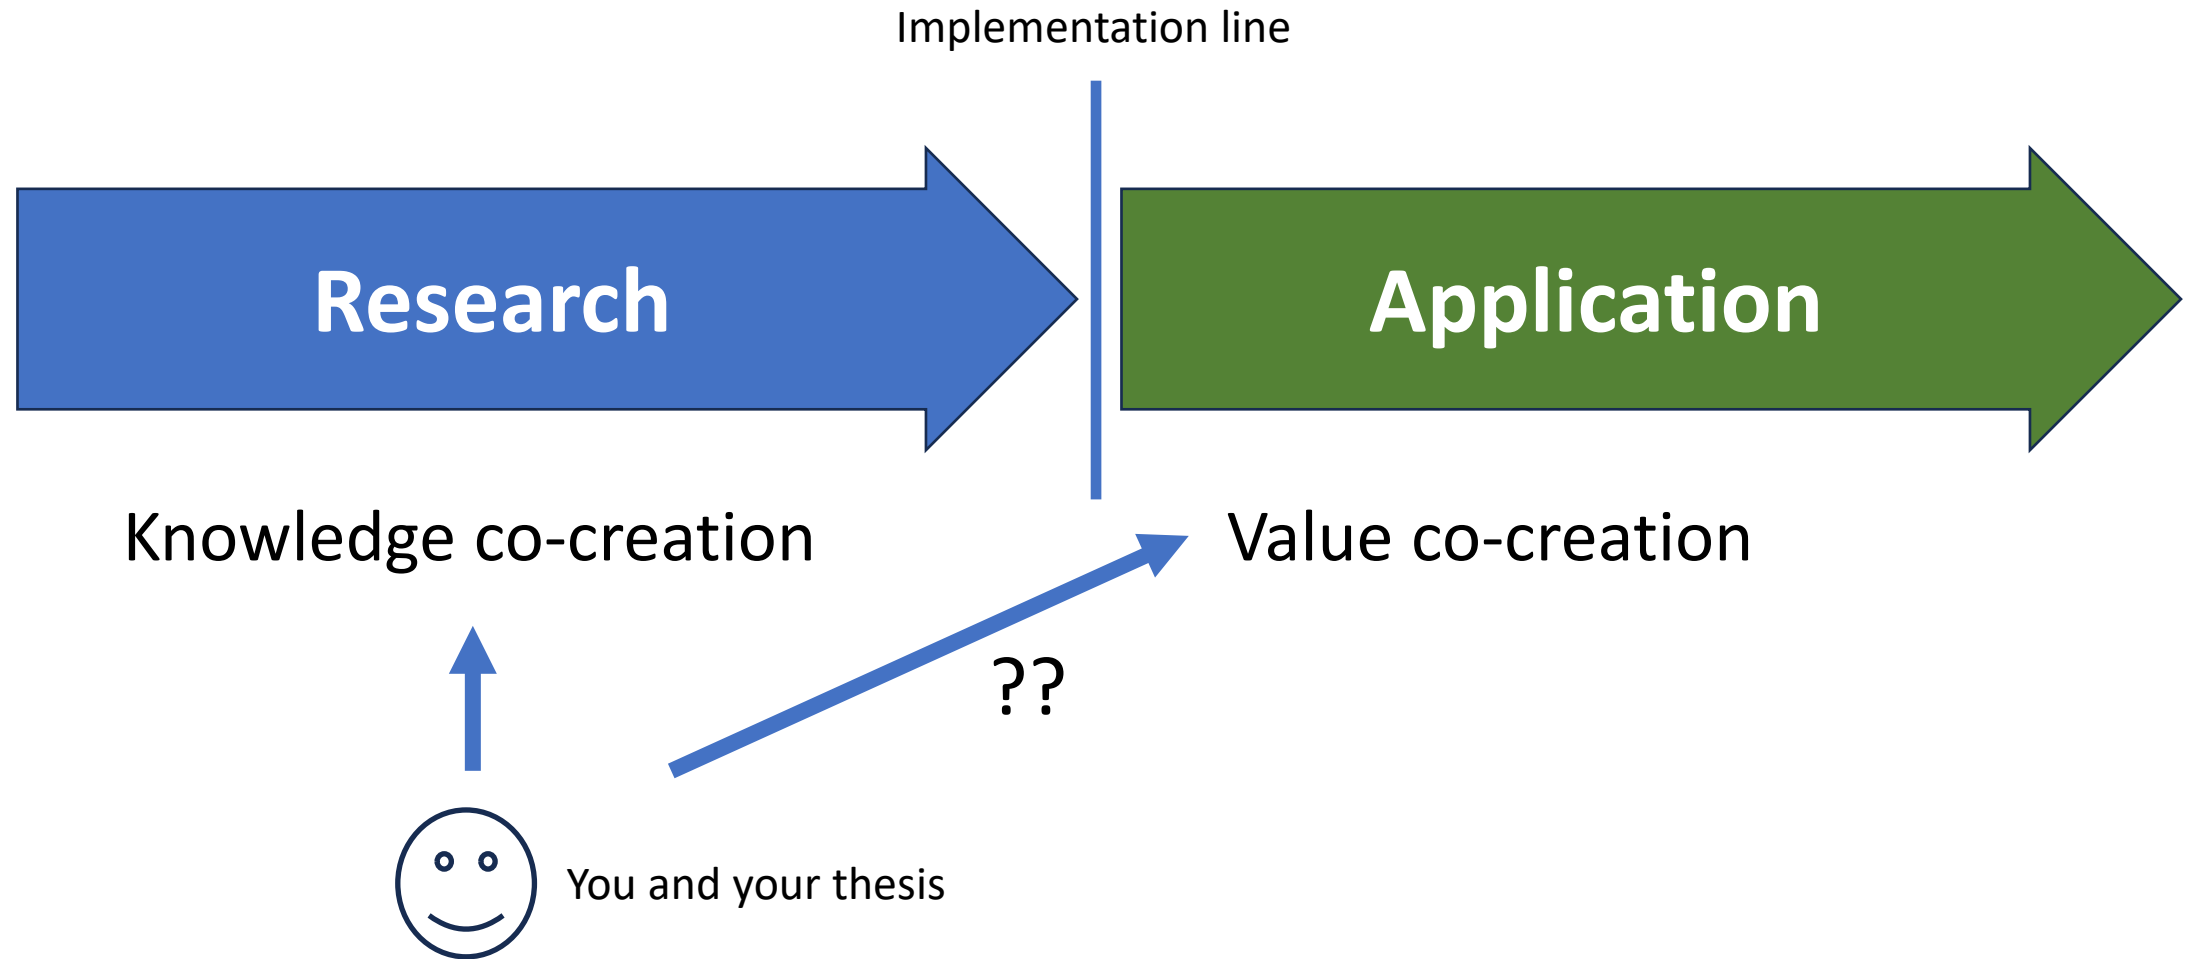

# What is the problem?

- This is the problem:
  - Anne is a 14-year-old girl with a disability. She loves swimming. However, she struggles to find swimming courses and activities that suit her needs. **Finding information about** swimming activities, in general, is not difficult (“I can just google it”), but finding **activities that are accessible and tailored to her needs** is often impossible. Activity descriptions online omit information about how tailored the activity is for her type of disability. The only way to find out is for Anne to show up. She has done that a couple of times but has given up after having ended up in awkward situations.

# The SIPA toolbox

SIPA: Service-Inspired  
Practice Analysis

# SIPA toolbox concepts

**Practice**

**Service  
ecosystem**

**Boundary  
resources**

**Value co-  
creation**

**Resource  
integration**

# Service ecosystem

# A service

A service is “the application of specialized competences (knowledge and skills) through deeds, processes, and performances for the benefit of another entity or the entity itself” (Vargo and Lusch 2004 p. 2).

Value co-creation

Boundary resource →

What is the ecosystem for your research outcome?

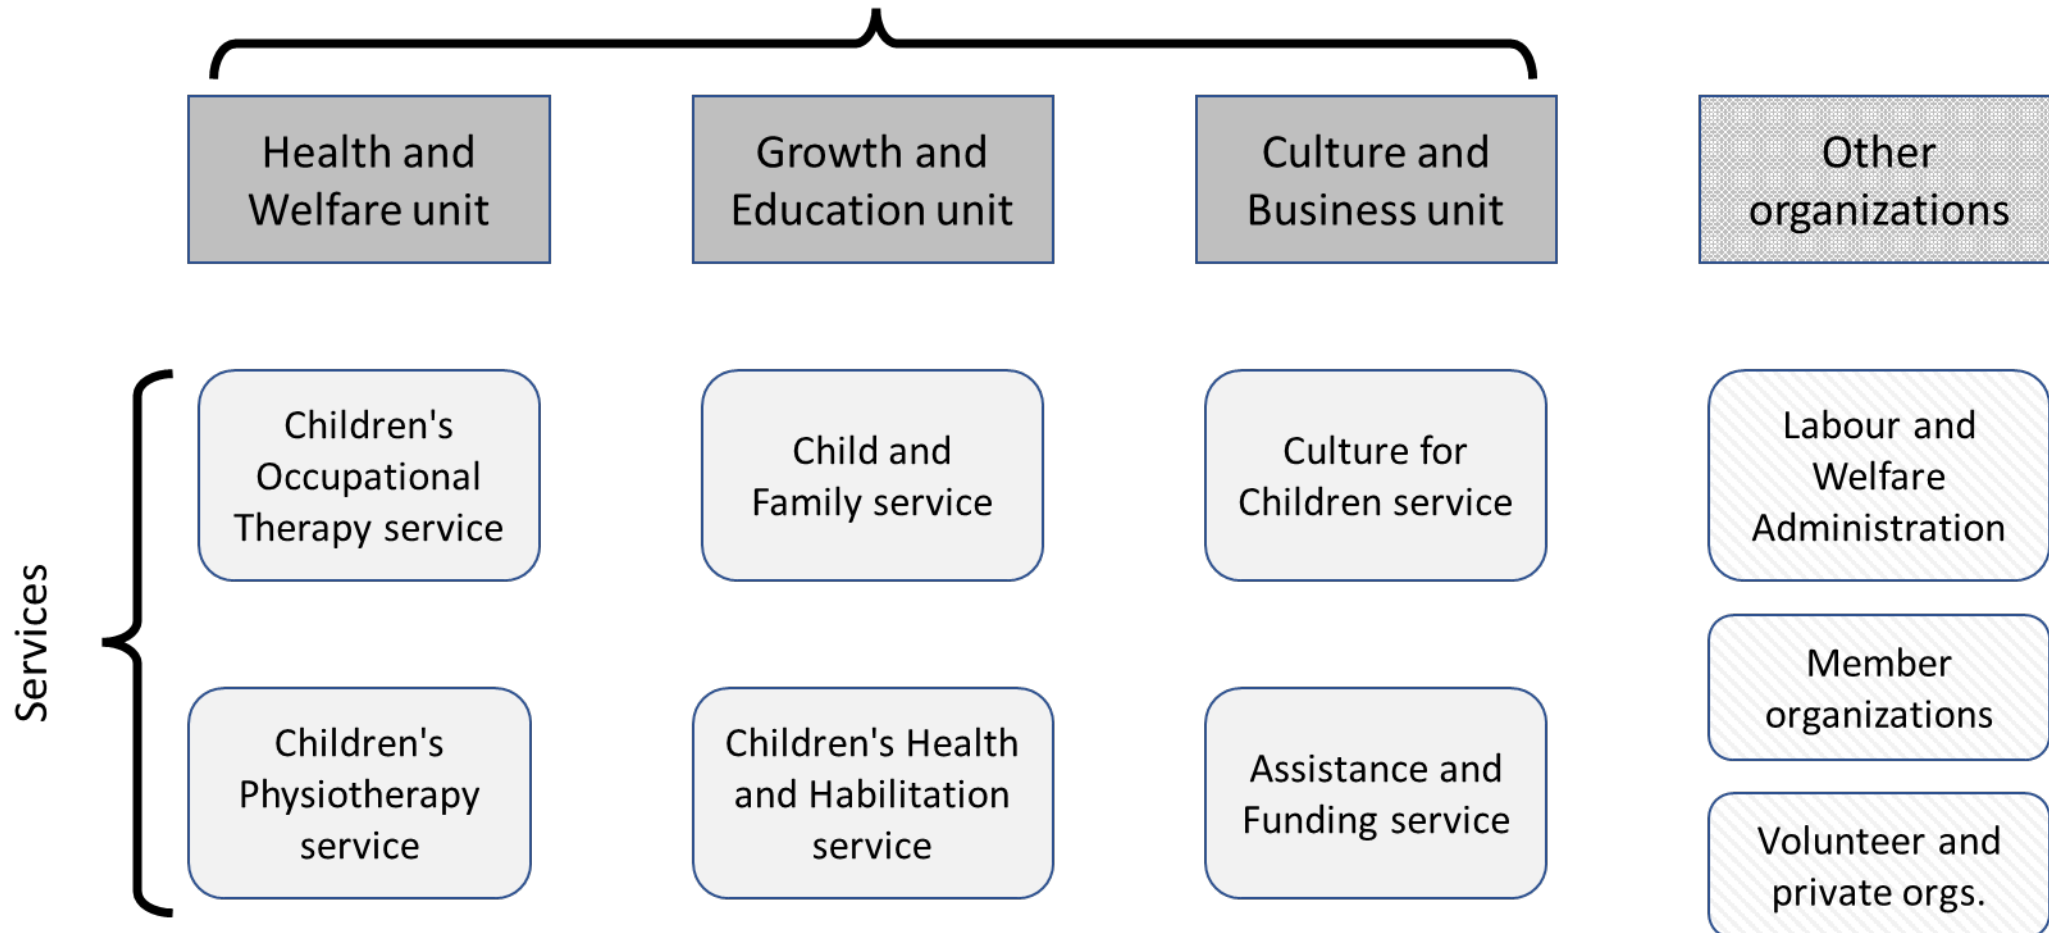

Knowledge co-creation

Value co-creation

# Anna's service ecosystem

Organizational units in the municipality

Let's take a break!

# SIPA toolbox concepts

**Practice**

**Service  
ecosystem**

**Boundary  
resources**

**Value co-  
creation**

**Resource  
integration**

# Practice

- “a routinized type of behaviour which consists of several elements, interconnected to one other: forms of bodily activities, forms of mental activities, ‘things’ and their use, a background knowledge in the form of understanding, know-how, states of emotion and motivational knowledge” (Reckwitz 2002 p. 249).

(Shove et al. 2012)

# Innovation as evolution in our practices

What are the practices in your service ecosystem?

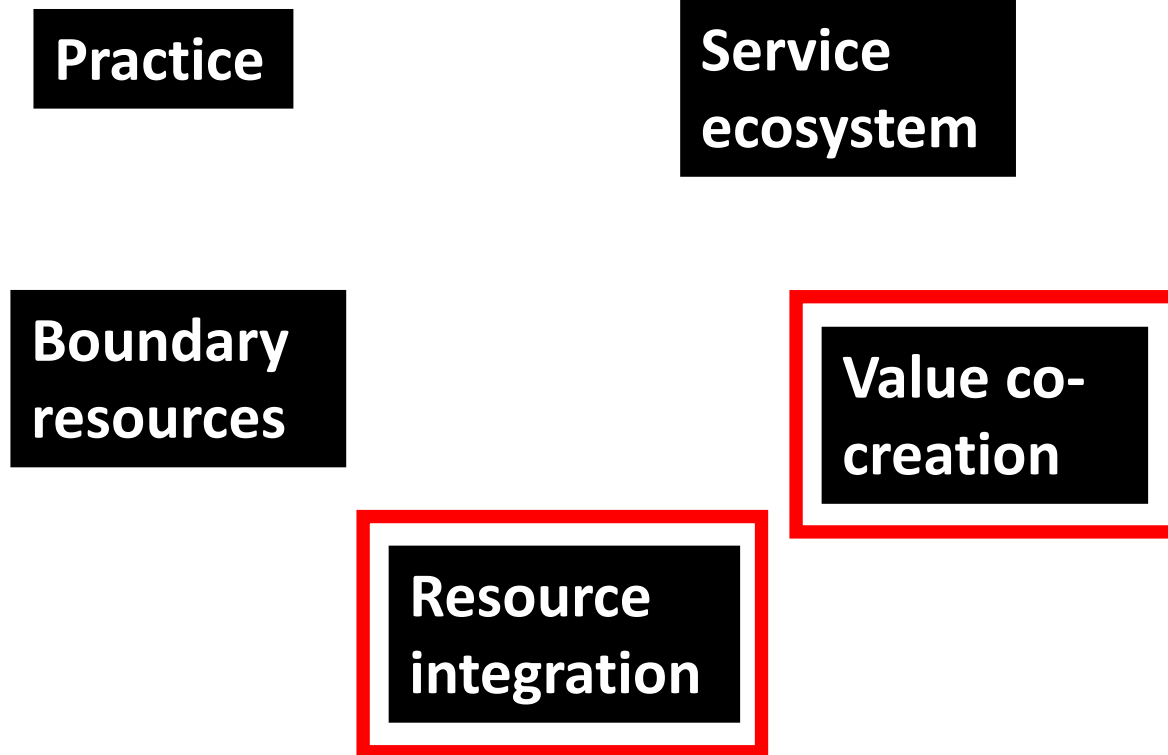

Knowledge co-creation

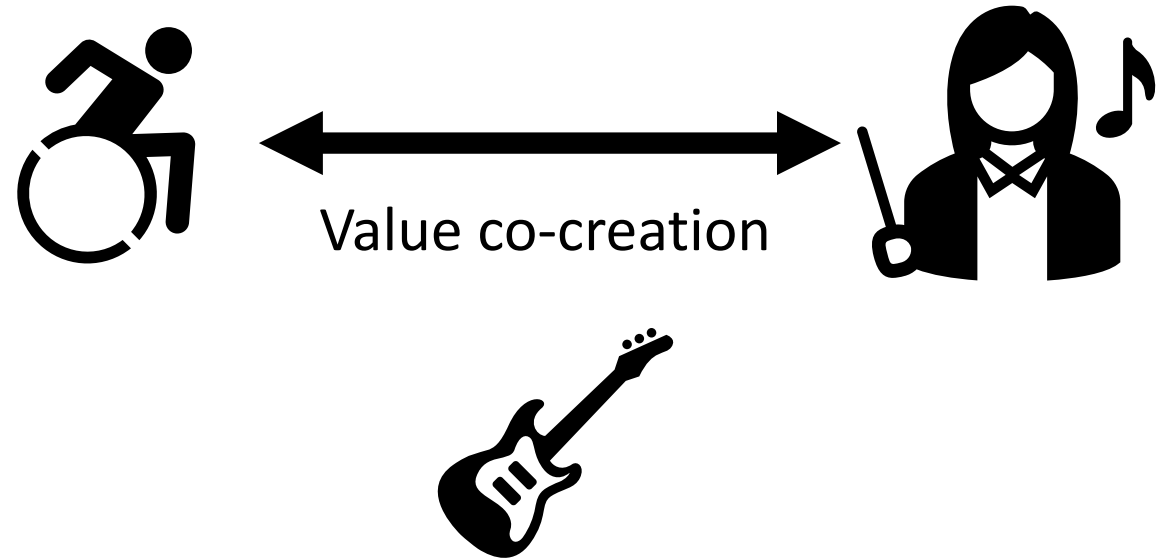

Value co-creation

# SIPA toolbox concepts

# Value co-creation

- Types of value
  - Value-in-exchange.
  - Value-in-use.
- “Value is cocreated by multiple actors, always including the beneficiary.”
- “Value is always uniquely and phenomenologically determined by the beneficiary” (Vargo and Lusch 2016).
- Wrong value propositions are one of the major reasons why technologies fail.

# Resource integration

- What is a resource?
  - Operand resource: Material.
  - Operant resource: Skill.
- Resource integration: The *practice* of integrating the value created in a service into our everyday practice.
  - Varies based on an individual's available resources.
- Failed resource integration is one of the main reasons technologies don't get used!

Source: Unknown

Can you think of any values and resource integration practices in your service ecosystem?

Knowledge co-creation

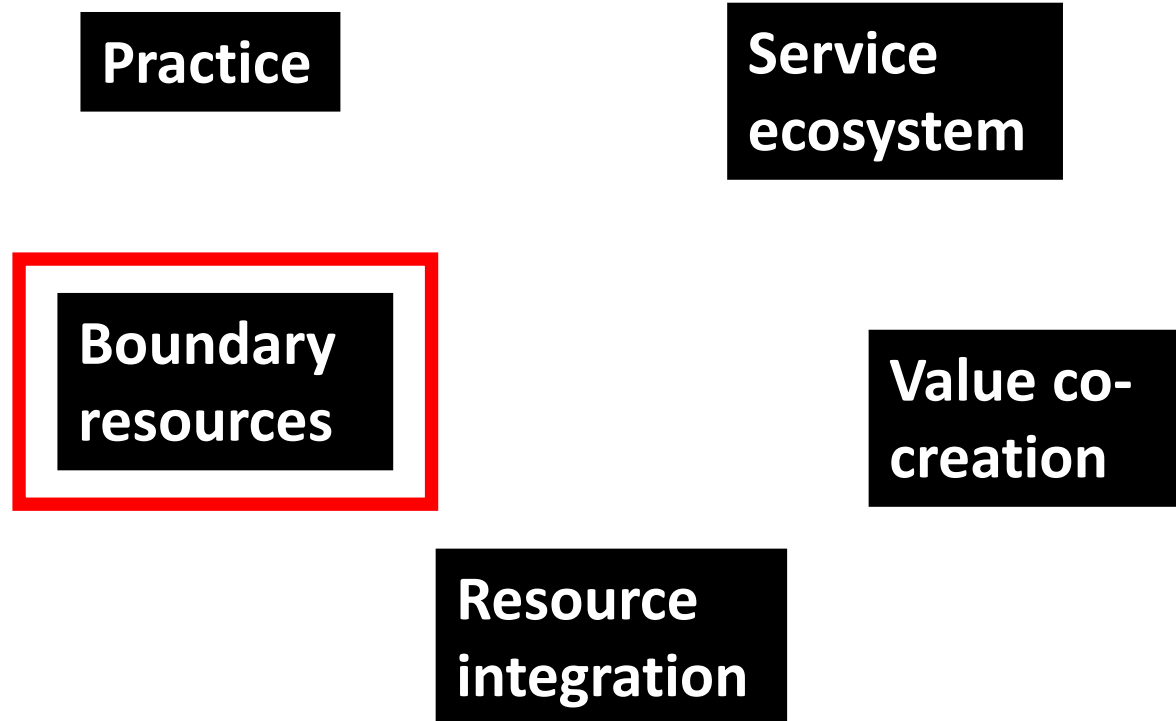

Value co-creation

# Practices and values from Ann's case

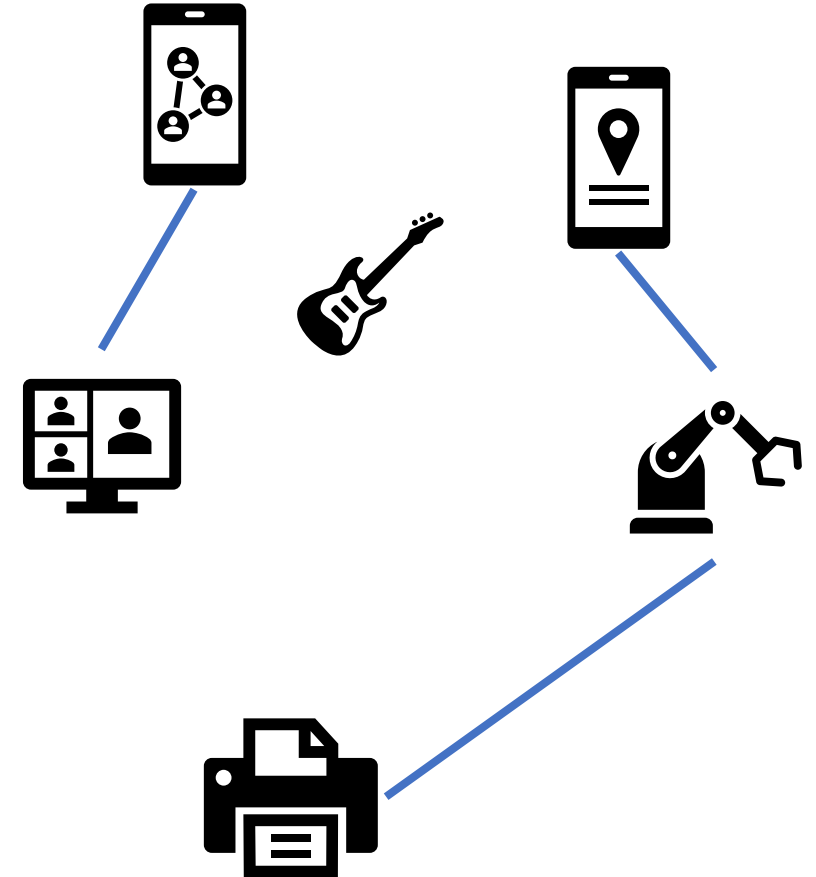

<b>Main actors</b>	<b>Involved practices</b>	<b>What is valued?</b>
Children	Search for information. Judge the settings for leisure activities. Participate in leisure activities. Maintain a social network of peers	Self-regard, social inclusion as equal and fair treatment, participation to fun activities where they experience mastery
Parents	Search for information. Learn about leisure activities. Assist their children in all the steps of participation. Get involved as volunteers. Participate in parents networks	Social inclusion of their children at the same level as other children. Equal rights for their children. Assistance and respite
Municipality activity organizers	Organize leisure activities. Handle administrative overhead related to resource allocation. Create activity descriptions	Activate children in leisure activities according to the national guidelines. Provide fair and universal access to leisure activities
Other activity organizers	Organize leisure activities. Recruit volunteers. Handle administrative overhead related to resources and marketing	Include disabled children. Sustain voluntary activities by recruiting parents. Make activities financially future-proof
IT experts	Develop or acquire IT solutions. Integrate with national IT infrastructures	Provide elegant and efficient (IT) solutions with the lowest cost
Politicians	Legislation. Budgeting. Negotiating	Find the best socio-economical tradeoffs for the inclusion of children with disabilities

# SIPA toolbox concepts

# Boundary resources

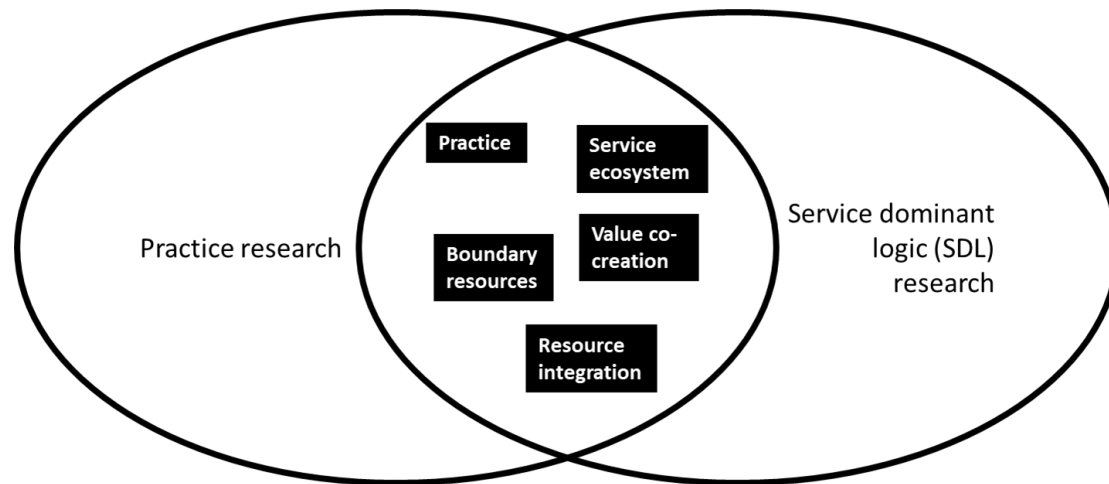

- “the stability of human social orders beyond particular contexts of action can only be explained when one allows for the work performed by objects—symbols alone do not resolve this puzzle” (Nicolini et al. 2011 p. 613).

# Agenda

- Whose problem is it?
- What is SIPA?
- **Why SIPA?**
- **Can we know everything?**

# Why SIPA?

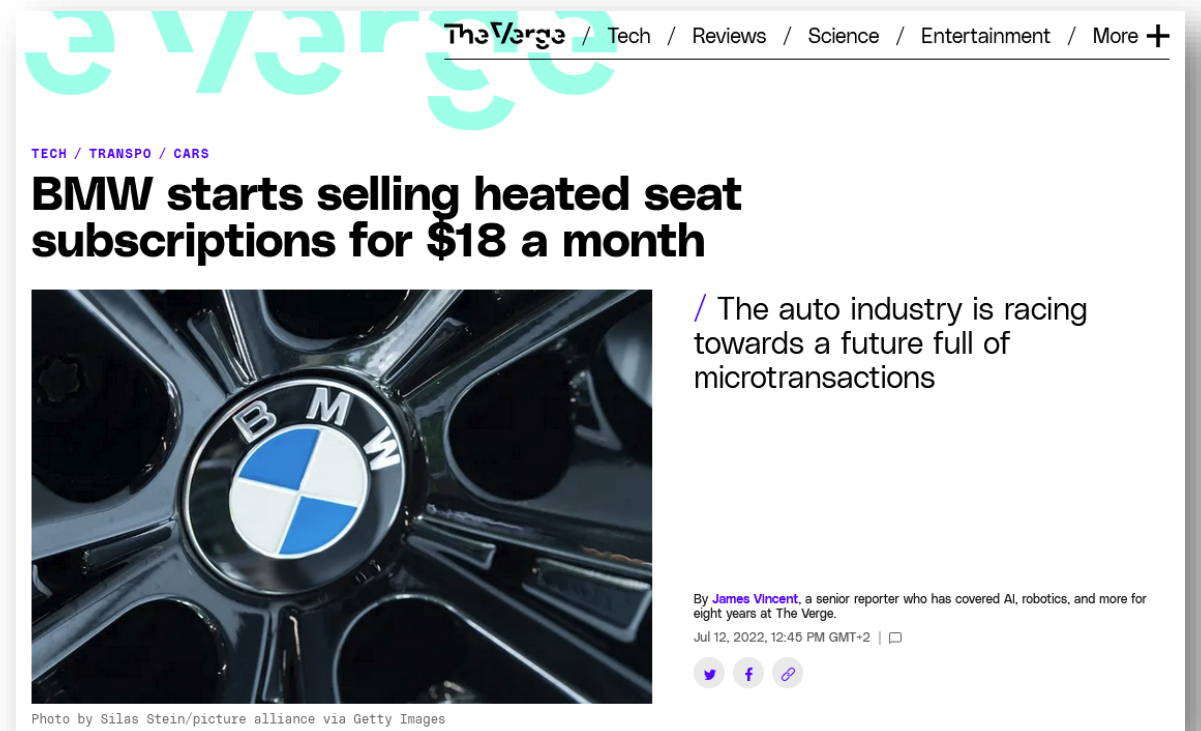

Knowledge co-creation

Value co-creation

# Why a service-inspired toolbox?

- The service sector counts for more than 70% of total employment and value-added in OECD countries.
- Chances are, whatever your research outcome will be, it will be wrapped and sold as a service if ever commercialized.
- Service exchange is a universal concept.
- SIPA's focus on value-creating **sociotechnical practices** provides a powerful analytical toolbox with empirical foundations.

The screenshot shows a webpage from The Verge. At the top, the site's logo is partially visible in green. Below it, a navigation bar lists categories: Tech, Reviews, Science, Entertainment, and More +. The article title is "BMW starts selling heated seat subscriptions for \$18 a month" in bold black text. Below the title is a sub-header "TECH / TRANSP / CARS" in purple. The main image is a close-up of a BMW logo on a car wheel. To the right of the image is a quote: "/ The auto industry is racing towards a future full of microtransactions". Below the image and quote is the author's name, "By James Vincent, a senior reporter who has covered AI, robotics, and more for eight years at The Verge.", followed by the date and time: "Jul 12, 2022, 12:45 PM GMT+2 | □". At the bottom of the article are social media sharing icons for Twitter, Facebook, and a link icon. A small caption at the very bottom reads "Photo by Silas Stein/picture alliance via Getty Images".

## Exclusive: OpenAI Used Kenyan Workers on Less Than \$2 Per Hour to Make ChatGPT Less Toxic

This image was generated by OpenAI's image-generation software, Dall-E 2. The prompt was: "A seemingly endless view of African workers at desks in front of computer screens in a printmaking style." TIME does not typically use AI-generated art to illustrate its stories, but chose to in this instance in order to draw attention to the power of OpenAI's technology and shed light on the labor that makes it possible.
